

BizFlow®: Powerful Features for Transforming Your Organization through Business Process Management

BizFlow 8 is the latest version of HandySoft's award-winning platform for business process management and workflow automation. It includes a set of advanced features that can help an organization simplify and automate processes, capture and enforce best practices, increase productivity and quality, and foster collaboration among employees, customers, and partners.

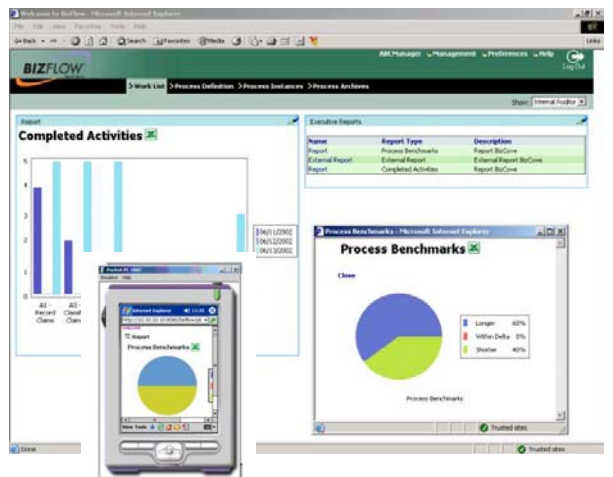

These features empower **process owners** such as managers, **process participants** such as employees and customers, and **IT personnel** to work together in collaborative business processes that accelerate business results and produce a measurable return on investment.

BizFlow: Transforming Business for Process Owners

- **Point-and-click modeling tool** lets you create and automate business processes as you design them to get processes up and running faster with less IT support
- **Monitor the status of your process in real-time** and get reports on benchmarks, trends, workload, and other aspects of the process — even export them to Excel, Crystal Reports, and other reporting tools
- **Import Microsoft Project and Visio basic shapes** directly into BizFlow to make it easy to go from concept to reality
- **Include external events** like a change to a database or an e-mail that will trigger a reaction in the process
- **Powerful forms design tool** to quickly create intelligent electronic versions of business documents; also use Word documents, Excel spreadsheets, Adobe forms, and web forms
- **Support for wireless devices, e-mail, telephony systems** lets managers get reports and status updates from BizFlow remotely

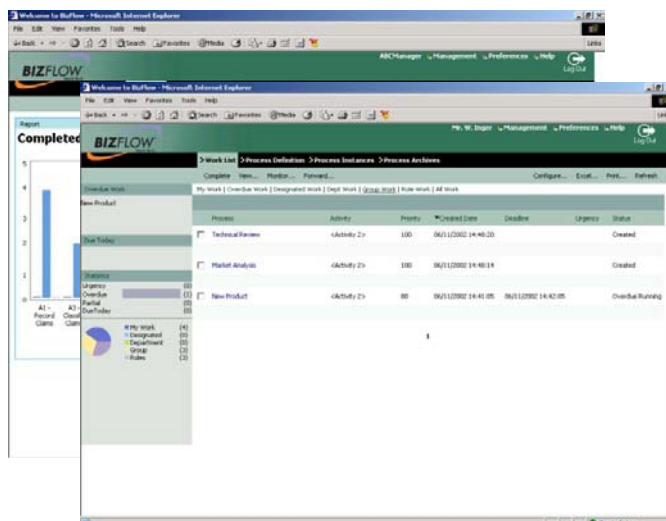

BizFlow's point-and-click Process Designer (above) lets you automate processes without programming skills, while real-time reports and monitoring (below) keep you informed of organizational performance.

BizFlow: Transforming Business for Process Participants

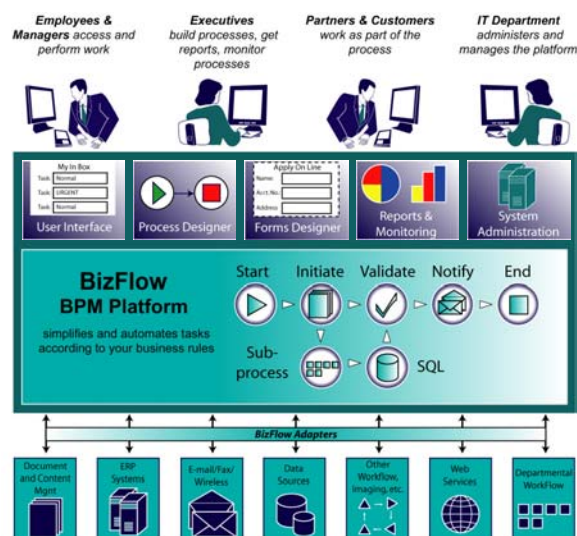

- **A single point of access to all BizFlow capabilities** through a Web-style interface that makes it easy for users to see the status of their work at every moment
- **An environment tailored to users' precise work** that provides access to the resources they need, when and where they need them
- **Ad-hoc routing of work items** to people, departments, user groups, or roles based on rules in the process model
- **Exception-handling** catches and fixes errors to ensure that processes continue even when problem transactions occur
- **Real-time alerts** in BizFlow and via e-mail and PDA keep processes moving

BizFlow's configurable interface lets each participant in the process see their own work in an easy-to-read format.

BizFlow: Transforming Business for IT Personnel

- **Lets IT managers leverage their current systems and applications**, saving money and letting them get new processes up and running faster
- **Out-of-the-box adapters** support rapid integration of data and documents from existing enterprise applications and document management systems into your processes
- **Supports the leading application servers, databases, and operating systems** to ensure that BizFlow will integrate smoothly into your current IT environment
- **Supports Web Services, web standards, and security standards** for safe, seamless collaboration with customers, suppliers, and technology partners
- **Scalable** to let you start with a departmental process and extend it across the enterprise and to partners and customers

BizFlow is a complete platform for integrating and coordinating the work of people, processes, and systems throughout your organization.
