

# BizFlow<sup>®</sup> Solutions for Government Finance

Maximizing Taxpayer Investment through Business Process Management

**Government agencies face unprecedented pressure to manage operational costs. Managing each financial transaction within government agencies is no longer a matter of choice. Agencies are expected to make the most of limited IT resources. Expectations of stakeholders, legislators, and citizens are high.**

## Deliver on mandates for government cost controls.

BizFlow Solutions for Government Finance are government-specific solutions that rapidly accelerate time-to-value from pre-configured and configure-to-fit process templates and HandySoft's best-in-class business services, designed to address the unique challenges that government agencies face in managing financial processes. BizFlow Solutions for Government Finance allow you to streamline, automate, and integrate financial processes, including accounts payable, accounts receivable, e-procurement, capital appropriations, grant management, taxation management, child support payments, loan processing, contracts, and others.

## BizFlow Solution for Government Finance

- ▶ **Deliver process management expertise** developed through more than 300 implementations worldwide
- ▶ Provide **repeatable process management solutions**, methodologies, and tools that streamline financial applications
- ▶ Leverage and integrate with **current ERP, CRM, EDMS, Oracle, SAP**, and other systems to achieve a rapid start-up and **ROI**
- ▶ **Link financial processes** with other departments and agencies, private sector business partners, and citizens
- ▶ **Rapidly adapt to changing business needs** without an army of consultants and months to change existing systems
- ▶ Leverage process model and forms templates to **jump-start implementation**
- ▶ Offer a worldwide team that **deliver and support process management solutions** that meet your requirements

## Benefits

**Reduce** the cost and cycle times in accounting processes through automation

**Eliminate** cost inefficiencies and redundant work

**Automate** routine steps and enable staff to handle exceptions

**Streamline** collection, billing, payment, and settlement processes

**Gain** real-time visibility and reporting of process status as measured against KPIs and other benchmarks

**Develop** and enforce internal controls to comply with accountability mandates

**Leverage** purchasing power, avoid penalties, and receive discounts

### Challenges in Government Finance:

- ▶ Manual, paper-based processes are inefficient, error-prone, and difficult to track
- ▶ Managers can't get reports on financial process status and performance
- ▶ Long cycle times mean late payment penalties, inability to take advantage of early payment discounts, delayed revenue collection, and participant dissatisfaction
- ▶ Existing finance systems can't automate/track approvals and exceptions
- ▶ Existing document management systems lack sufficient workflow for process management
- ▶ There's no cost-effective way to leverage existing technology investments
- ▶ Agencies lack a common platform for extending financial processes outside the agency.
- ▶ "Islands of Automation" don't allow the sharing of information and processes among agencies and other governments.

# BizFlow automates all government financial processes from beginning to end.

**Whatever your current or future needs, BizFlow Solutions for Government Finance can make government agencies more efficient and effective by automating processes, including accounts payable, accounts receivable, procurement, and general financial processes.**

**BizFlow E-government Solution for AP** allows government agencies to integrate current AP systems and processes into a unified solution that enables the tracking of payables from submission to payment, auto-payment of routine invoices, handling exceptions that require human attention, and obtaining reports on where invoices are in the approval and payment process. Leverage and enhance existing systems by integrating them with the automated AP process.

**BizFlow E-government Solution for AR** helps shorten payment cycle times and gives government agencies the ability to track receivables from invoicing to payment. Track the AR process and integrate with finance systems to post receivables in a timely fashion. Automatically process and match tax collection IDs with scanned Check Numbers. BizFlow's portal-ready architecture allows citizens and businesses to safely and securely interact with the AR process and back-end systems. Improve citizen and partner satisfaction by streamlining and automating all interactions between government agencies and those that they serve.

**BizFlow E-government Solution for Procurement** allows government agencies to automate the manual, paper-intensive tasks involved throughout the value chain. Track acquisitions from beginning to end and eliminate errors caused when requests are lost. Manage logistics processes and integrate with ERP and other logistics applications. Leverage current systems to determine if a requested item is already owned before purchasing. Receive vendor discounts by integrating to inventory systems, consolidating purchases to a single vendor, and eliminating duplicate purchases. Allows greater visibility into working capital and streamline cash flow throughout the agency.

**BizFlow E-government Solution for General Finance** streamlines finance and accounting operations from beginning to end, across multiple systems, users, and locations. Automate and track the processes involved in capital asset funding and appropriation requests in real time. Speed month-end closings and accruals with automatic reporting and routing. Manage the exchange of electronic forms and integrate quickly and easily on a business-process level with multiple systems, including ERP, CRM, and financial systems such as Oracle and SAP. Automate travel requests and expense reporting. Increase the efficiency of financial operations by automating critical activities among users and systems, and by providing access to the information that agency managers, business partners, and citizens need, when they need it, in real time.
